Antibacterial treatment

Commitment to Sustainability

MattDeco is an environmentally friendly product.

Plastic-free surface

Reduction of the carbon footprint

70% recycled material

100% ecological lacquer

100% recyclable material

Our technology

MattDeco is composed by a particle board, which has **70% recycled material** and is **100% recyclable**, coated with decorative paper on both sides, to which a layer of acrylic lacquer is applied on the front side, providing resistance to staining, dry and humid heat. Its lacquering process is ecological, which makes MattDeco a **plastic-free** surface.

Its structure is reinforced with an **underlay** on both sides for **easy cutting and edging processing**. In addition, this underlay improves its surface quality, giving it flatness and greater protection against humidity.

The Alvic impregnation and lacquering process guarantees a high resistance to light, so that **the colours remain unaltered**, and its superficial layer provides a low reflection of light, achieving an ultra matt finish.

Composition

- 1 Protective film
- 2 Decorative paper with Alvic lacquer technology
- 3 Underlay
- 4 Chipboard (70% recycled material)
- 5 Decorative paper

Service

The standard size is 2850 x 1850 x 18 mm.
